RESTORATION NEWS

SUMMER 2007

TAKE CONTROL OF ANY ENVIRONMENT.

EnviroBoss

Environmental control of job sites has become more important to restorers than ever before. We recognized the need for products that could do more than just cool – especially one that could control any environment. We've now developed two new products that can cool, heat or dehumidify – both in our new EnviroBoss™ line.

The first is the EB1400 – it provides a rotomolded, portable solution for tackling temperature and humidity problems in any climate. Offering 1-ton cooling effectiveness at 470 CFM, it can remove up to 110 pts/day at 95°F/60% Rh while it keeps the job environment under control.

It's designed for cooling, heating, dehumidifying or air exchange. The two interchangeable 8" ducts offer focused heating, spot cooling or enhanced dehumidification, depending on how it's ducted. In fact by ducting it into LGR dehumidifiers to pre-cool them, you can even enhance their low-grain performance!

The second product in our EnviroBoss line is the trailer-mountable EB6000 (available in August 2007). It is designed to aggressively take on any drying situation in any climate - year-round. The unit's 18" ducts offer

maximum versatility with drying, cooling and heating in all climates - on all jobs. It will even dry or cool in tropical conditions, cool in hot or dry weather, dry and heat in cold conditions, and it can be used for heating or air exchange for cold or dry weather.

It is capable of removing more than 650 pints/day at AHAM (80°F/60% Rh) with an amazingly powerful airflow of 5,8000 CFM (using both air streams).

During summer months when high temperatures and high humidity are a problem or in colder climates when supplemental heat is necessary, both units will provide a solution to take charge of any environment.

Terry Bowden

Leads Line-up at Dri-Eaz Symposium

Get exclusive access to top-notch presenters such as keynote speaker Terry Bowden who will share his strategies for winning with better teamwork. Meet Donald Gatley, who literally wrote the book on psychrometry, "Understanding Psychrometrics," and Bob Pritchard, international marketer of the year and author of "Kick Ass Marketing." There will even be a panel of experts on the industry's next big turning point in job monitoring, remote sensing.

This year's breakout session topics include:

- Effective Ways to Immediately Improve Your Bottom Line
- Advances in Desiccant Dehumidification Technology
- The Nuts and Bolts of Drafting a Good Contract
- Psychrometrics: Linking RH, Grains, Dew Point and EMC.

Go Ahead – Streamline Your Next Job.

Dri-Eaz is the first to offer a convertible, quick-opening airmover housing that allows for easy cleaning. It's the Jet CXV TurboDryer®, and it drives a powerful 3200 CFM at only 3 amps max.

It's aerodynamically designed for the highest velocity airflow. The Jet's built-in direct angled airflow maximizes laminar airflow in all the right places for the fastest drying. You can even daisy chain up to 8 units on low speed (on a 15-amp circuit) using the convenient onboard outlets – that's up to 200 feet without extension cords!

With quick stackability and easy transport using the Unimover handtruck – the new Jet will be an integral tool for any restorer.

We want to help you remember to change out your dehumidifier filters more regularly. So we recently teamed up with your local distributors to help each site stock up on new 3M™ filter packs.

Why is using a clean HAF filter important? For starters, they protect your dehumidifiers for longer life, they capture and retain more particles than traditional filters, prevent mold growth, keep coils clean (so dehumidifiers condense water from the air more effectively), minimize airflow resistance and allow your dehumidifiers to run cleaner overall.

Packaged in sets of three filters, each set contains a detailed instruction insert. They are also packaged with reminders of when to change the filters and how to clean them. In fact, you can vacuum out HAF filters three times before disposing them. It's like having four filters in one!

TEST DRIVEN

ROVER T-SHIRT GIVEAWAY!

We have given away over 1,350 T-shirts

to those who have test-driven the Rover HVE at their local distributor locations! We have a few more T-shirts left, so if you haven't had the chance to "test drive" the Rover then visit your local distributor to discover just how maneuverable the new Rover HVE is. Go to: www.dri-eaz.com/Rover and click on Locations to find one near you!
